DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 – 20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 – 20 of Martinez et al (6,711,957). Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims include running one or more tests on the mix designs using a gyratory compactor, digitally collecting data from each gyration and selecting an optimum mix

based on the gyration data but does not disclose estimating volumetric properties for mix designs. However, in Martinez et al, a computer readable code estimates and predicts the volumetric properties (See Col. 2, lines 5- 8).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the estimation or prediction of mix designs for the purpose of, developing an asphalt paving mixture having sufficient asphalt to ensure a durable pavement, sufficient mix stability to satisfy traffic demands without distortion or displacement (See Martinez et al, Col. 1, lines 8 – 21).
